PRINT AND PLAY PDF

demo version

Welcome to the free print-and-play demo PDF for *The Story Engine® Deck*.

This demo includes 1/3rd of the cards that make up full physical deck and was designed to print at the same size (3" x 3"). You should be able to get a lot of use out of it, but if you decide to upgrade to the complete physical deck, you'll find the number of possible combinations increases exponentially and the production quality really shines.

Should you decide to upgrade to the full digital deck, you'll also gain access to a printer-friendly variant that fits 12 cards to a page and saves a considerable amount of ink and paper.

To produce this high-quality print-and-play:

1. Print a test of page 1 and 2 double-sided.
2. Cut along each of the lines marked with small ticks around the edges of the page. (Tip: If using a blade trimmer with a "rest" that squares the corner of the paper, set it to 3" to ensure all your cuts are the same size.)
3. If the alignment of the test cards looks correct, print the remaining cards double-sided and repeat Steps 2 and 3.
4. Optional: Use a rounded corner punch to cut rounded corners on the cards.
5. Recycle the trimmings.

If printing on plain paper, you may wish to print single-sided and mount the cut cards on 3" x 3" squares of cardstock or in sleeves.

If printing in black and white or single-sided, you may wish to mark the edges of each card with a highlighter or marker for fasting sorting.

If you are printing at a print shop, you may wish to include this page as proof that you have permission to print this. (Speaking of which, yes, you do have permission!)
