PRINT AND PLAY PDF

free educator version

Welcome to the free educator version of the print-and-play PDF for *The Story Engine® Deck*.

This version has been modified from the original deck to use as little ink as possible and fit as many cards on each page as possible. The original deck cards are larger and feature more vibrancy and design details.

To produce this print-and-play:

1. Print out pages 1 to 30 double-sided.
2. Cut along the dashed lines that show on the faces of the cards on on each page.
3. Optional: Use a rounded corner punch to cut rounded corners on the cards.
4. Recycle the trimmings.

If printing on plain paper, you may wish to print single-sided and mount the cut cards on 2.5" x 2.5" squares of cardstock (for example, playing cards cut on one side) or place them in sleeves.

If printing in black and white or single-sided, you may wish to mark the edges of each card with a highlighter or marker for faster sorting.

If you are printing at a print shop, you may wish to include this page as proof that you have permission to print this. (Speaking of which, yes, you do have permission!)

Note: Story Engine is a Precis Intermedia trademark for its collaborative roleplaying game and rules (pigames.net). The Story Engine is a Peter Chiykowski trademark for his deck of story prompts (storyenginedeck.com).
